

ENDPOINT DEFENSE

ASSESSMENT

MAKE STRONG ENDPOINT SECURITY A PRIORITY – AND A REALITY

PUTTING ENDPOINT RISK IN THE ATTACKER'S PERSPECTIVE

While every person in an organization should be proactively engaged in endpoint defense protection – what happens when human defenses fail?

Employees leverage mobile devices, home networks, and unmanaged WiFi to connect seamlessly to cloud-based applications and corporate systems. But the proliferation of endpoint devices that support this access has greatly expanded organizations' attack surfaces, supplying more potential targets for adversaries to exploit.

Not surprisingly, the number of cyber attacks on endpoints continues to rise – largely the result of user-owned devices that are connected to corporate systems. Organizations generally cannot enforce corporate security policies and protections on these endpoints. As a result, BYOD devices pose a greater security risk as well as a challenge in terms of the visibility of these devices in the environment.

Reveald Endpoint Defense Assessment delivers insights to optimize endpoint security strategies and reduce risk.

Reveald delivers a vital comprehensive view of the organizations' endpoint security landscape so security teams can see security gaps and exposures in their environment from the attackers' perspective. Our insights inform actionable strategies for proactively addressing these gaps and adjusting configuration policies and defensive and responsive controls to minimize potential security risk.

KEY BENEFITS

Pinpoints current endpoint security risks and outlines actions to improve endpoint defenses and reduce incidents.

Identifies gaps or insufficient coverage within existing security technologies to support near-term and long-term strategic planning.

Delivers actionable and prioritized recommendations to maximize existing endpoint security solutions.

Provides suggested technology changes to improve and strengthen endpoint security posture.

CRITICAL INSIGHTS THAT HELP YOU REDUCE RISK AND IMPROVE ENDPOINT DEFENSE

The Reveald Endpoint Defense Assessment is the fastest way to assess, analyze, and get an action plan into place to minimize your endpoint exposures and thwart attackers.

Our in-depth evaluation shines a bright light on the effectiveness of your in-place endpoint security. We uncover hidden assets and vulnerabilities across your entire distributed environment. And we provide comprehensive insights and actionable recommendations to help you proactively close security gaps and improve your defensive controls and safeguards.

The result is reduced endpoint risk – and faster threat identification and resolution in the event an endpoint device, including BYOD, is compromised.

ASSESSMENT OUTCOMES

EXECUTIVE SUMMARY

of our findings and recommendations in straightforward business language to share with your key stakeholders

TOP IMPACTFUL ACTIONS

for endpoint security improvements based on our findings

PRIORITIZED RECOMMENDATIONS

to optimize your endpoint security strategy and reduce risk

CONFIDENCE THAT ENDPOINT DEFENSES

are effective enough to prevent security incidents

ABOUT REVEALD

Reveald is the only managed services company to offer a holistic approach to cybersecurity focused on the offense plus defense continuum to maximize risk reduction for clients. From operationalized continuous exposure management to comprehensive managed defense to moving beyond remediation to full resolution of risk and threat issues, Reveald solves the people, processes, and technology equation to deliver proven business outcomes.
